**Job Title: Product Engineer**
**Location: Bangalore**

Amoga, a Bangalore based SaaS startup, with headcount of 50+ employees, founded in 2021 by the IIT & IIM Alumni having successful Technology Entrepreneurship experience of 20+ Years. We offer businesses low-code no-code platform to streamline their workforce (and work), like never before.

The underlined low-code platform meets a) the demanding need of ever-evolving business processes and b) the required tools to stitch together the various software systems to automate information flow across the organization in a meaningful manner.

If you are looking for a lucrative career opportunity which is challenging yet rewarding and satisfying Amoga is the right place for you.

Amoga is looking to expand the team with like-minded professionals who can team up to build an innovative software product company. We are looking for a Product Engineer who would be responsible for low code solutions, ensuring successful deployment and integration with existing systems. This role involves configuring and customizing low code applications, troubleshooting issues, and delivering high-quality solutions within project timelines.

**Responsibilities:**

1. Onboard new enterprise clients on the platform, configure the application and set it up as per the client's requirements

2. Implement using low-code tools, Scripting language, JavaScript to fulfil the client's requirements.

3. Engage with presales, sales, customers, and project managers to deliver the features as per the business requirements

4. Work on SIT (system integration testing) and UAT (user acceptance testing) to ensure the customer system is free of bugs and implements the desired features/functionalities

5. Provide support to the clients for the bugs or any further requirements the customer may have.

**What make you stand ahead:** Good aptitude, learning attitude, Communication and quick learner to grasp the things quickly.

**Who can apply:**

Only those candidates can apply who:

1. B.E/B.Tech graduates.

2. Good with mental ability (We conduct Mental Ability assessment test Includes questions on Numerical, Abstract and Verbal Reasoning in first round)

**Requirements:**

Have a good understanding of low code platforms, JavaScript programming languages, and database systems to develop and customize applications.

Possess strong analytical and problem-solving skills to identify and resolve technical issues that may arise during the implementation process.

Excellent communication skills & attention to detail.

Analytical mind, good aptitude and problem-solving aptitude.

Strong organizational skills.

If you think this might be just what you're looking for, kindly revert with your update resume.

**Note:** We do aptitude & reasoning test to proceed ahead, please apply if you have good command over the same.
